

MY CONTACT APP FOR JS_311 By: Kris Rodgers

/Contacts

I want this app to be used for people that just know way to many people i want to be able to add more routes in here to group the contacts in a better form currently i have a way to just add a contact into the app and have a list of contacts

/Favorite

Then i added a way to group these contacts in a better form with using the Favorite contact which the user can add contacts into that way the user can add contacts into their favoirte for the people they talk to the most/like the most

/Work

Then I remember that most people have jobs I know how frustrating it is when you have a 100 people contacting you a day / making 100 calls a day is a lot easier when more organized so i added a work route that would be able to add a contact to the work contact just to give a more organized feel for all of your contacts

//just added this for when you see my project next course this is the way i am going to set it up I also added a relationship that i would like to use to group them in the future such as family or work or favorite or dont like the people whatever it may be i want to next course use the relationships to group all of my contacts
